

Wall Flange for combined °C and R.H. probes

HD9008.31

Introduction

Wall-mounted probe installations need a clean fixing point and a cable exit that matches the probe type. HD9008.31 provides wall flange options for combined °C and R.H. probes, supporting defined installation on the wall.

The accessory is available with Ø 14 cable outlet or with gland for fixing Ø 12 mm probes. This gives installers two flange configurations under the same mounting concept, depending on the probe and cable routing required.
