

Adapter cable for M12 plug and SICRAM module connection

CPM12S

Introduction

For setups that need to link an M12 interface with a SICRAM module, this adapter keeps the connection straightforward. It provides an M12 plug at one end and a SICRAM module at the other, helping users integrate the two connection types without additional conversion steps.

The 5 m cable gives practical distance between the connected components, which supports cleaner positioning in measurement setups where the device and probe are not mounted directly next to each other.

Clear connection

Links an M12 plug to a SICRAM module.

More reach

Convenient cable length of 5 m.

Features

Connector arrangement

The adapter has an M12 plug at one end and a SICRAM module at the other end.

Cable length

The integrated cable has a length of 5 m.
