

Windows software for continuous PRO-Line logger recordings

ProXware

Introduction

Continuous logger recordings are easier to evaluate when the data is organized, visualized and reported in one Windows software environment. ProXware supports PRO-Line loggers by providing a PC-based workflow for continuous recordings, helping users move from logged data to usable documentation.

The software includes a database system for managing recording data and graphical visualization for reviewing measured values over time. This supports clearer analysis of logger trends and makes it easier to prepare results for internal records or customer documentation.

PDF reporting is included for documented output from the recorded data. Access is provided via download link for the software.

Features

Continuous logger recordings

The software is designed for continuous recordings from PRO-Line loggers in a Windows environment.

Database system

Recording data is managed in a database system within the software.

Graphical visualization

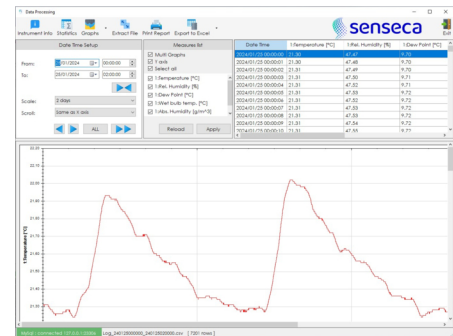

Measurement data can be displayed graphically for reviewing recorded values and trends.

PDF reporting

The software provides PDF reporting for documented output from continuous logger recordings.

Download access

The software is made accessible via a download link.

Continuous records

Supports continuous recordings of PRO-Line loggers in Windows software.

Organized data

Includes a database system for managing logger recording data.

Clear visualization

Shows recorded data graphically for reviewing measurement trends.

PDF reporting

Creates PDF reports from recorded logger data for documentation.
