

Mouthpiece for breathing air gas analysis

MSK 100

Introduction

Breathing air checks need a clean and simple interface between the user and the measuring instrument. This disposable mouthpiece supports breathing air measurement in gas analysis applications and is intended for single-use handling.

For users carrying out repeated measurements, the mouthpiece helps keep the sampling process straightforward while supporting hygienic separation between individual users. Its role is focused and practical: it provides the contact point for breathing air measurement with compatible gas analysis equipment.

Features

Disposable mouthpiece

MSK 100 is used as a disposable mouthpiece for breathing air measurement.

Gas analysis use

The mouthpiece is intended for breathing air applications in gas analysis.
