

GBSx 91

Introduction

For moisture checks below the surface, probe length is the decisive detail. This brush probe family gives users two clear options for material moisture measurement: GBSK 91 for depths up to approx. 100 mm and GBSL 91 for depths up to approx. 300 mm.

The short version supports shallower measurements, while the long version reaches further into the material. Both variants are shipped as a pair, making the family easy to identify and select for the required measuring depth.

Depth choice

Select GBSK 91 up to approx. 100 mm or GBSL 91 up to approx. 300 mm.

Material moisture use

Brush probes support material moisture measurement below the surface.

Pair delivery

Each variant is shipped as a pair for the selected probe length.

Features

Short probe version

GBSK 91 is the short brush probe version for material moisture measurement at depths up to approx. 100 mm.

Long probe version

GBSL 91 is the long brush probe version for material moisture measurement at depths up to approx. 300 mm.

Pair configuration

The brush probes are supplied as a pair for the selected version.

Order Hints

Measuring cable GMK 38 necessary.
